deductive-logical thinking
result summary

Runaj Khatiwada

Administration: 18.05.2020

Report generated: 18.05.2020

What does this test measure?

In this test the task is to choose the correct operators to receive a certain result. Therefore, the test measures the capability of deductive logical reasoning. To recognize complicated and complex cause-and-effect-chains and to draw the correct conclusions out of it is vitally important in certain occupational areas.

How to interpret your result

Your performance score has been calculated based on correct and incorrect answers. Please consider that this is only a snapshot of your performance which can be influenced by various factors. Your performance on the test can be described as follows:

Compared to other participants, it is easier for you to handle the tasks in this test successfully.

What is your processing style like?

In addition to the performance score your processing style is measured. It indicates how many questions you completed in the default time (speed) and how many of those questions you answered correctly (accuracy). These two scores are compared with the scores of other participants as well. The optimal processing style is to complete as many questions as possible, as accurately as possible.

Number of completed questions (speed): 13
Number of questions correctly answered (accuracy): 11

Your processing style can be characterised as follows:

Your completion of the test was quite fast and extremely accurate, this means that you completed approximately as many tasks as most other participants and answered almost all of these correctly.
